

Hach Technical Training Center

For over 20 years, the Hach Technical Training Center (HTTC) has provided world-class hands-on training helping thousands of people ensure they are performing their water analysis correctly so they achieve accurate results, every time.

Our courses focus on basic laboratory practices and methods which include electrochemical (pH, conductivity, dissolved oxygen, etc.), colorimetry (chlorine, fluoride, phosphate, nitrogen species, metals, TOC, etc.), turbidity measurement and titrations (alkalinity, hardness, chlorine, etc.). Advanced courses address more complex methods and applications. HTTC's application-based, hands-on training classes are available to fit every budget:

Regional Training

- **Hands-on laboratory analysis training in convenient, regional locations**
- **Topics relevant in drinking water, wastewater, industrial applications**
- **Useful for plant operators, instrument technicians, laboratory personnel, plant managers, and superintendents**
- **Most classes are state approved for Continuing Education Units**
- **Class offerings, schedules & locations are available at: www.hach.com/training**

Customized Training

- **Custom classes designed for your individual needs taught at your location or at the Hach Company in Loveland, Colorado**
- **For more information and pricing, call: 1-800-227-4224 x2344 or email: httc@hach.com**

Hach's knowledgeable instructors, each with extensive experience in instruction and water analysis, can increase the skill and confidence of your operators through practical, hands-on training with Hach instrumentation.
