

Upgrade your Turbidimeter with Confidence

Let Hach's Certified Technicians Support You

Thinking of replacing your 1720E Turbidimeter with the new Hach® TU5 Series Laser Turbidimeter, but you...

- Don't have the time to invest in learning how to operate and maintain a new piece of equipment?
- Don't have the manpower to dedicate to an upgrade?
- Are hesitant to convert to a brand-new, unfamiliar technology?

If so, Hach's new two-visit WarrantyPlus Service Partnership with Transition Support can help you easily integrate the new technology into your process and give you confidence in your turbidity results.

During the implementation visit, your Hach Field Service Technician will decommission your 1720E, mount and start up the new TU5, and guide you through operation, maintenance and troubleshooting.

During the follow-up visit, the technician will perform annual maintenance and a hardware check, as well as provide refresher training to assure that you are comfortable with the new technology.

See if you qualify. Contact your local Hach sales representative or call 800-227-4224 x6170.

Also included with WarrantyPlus coverage:

- All parts, labor, and travel for on-site services
- Priority status for covered repairs
- Work completed at your facility by certified Hach technicians
- Field Service Report with complete documentation of service performed
- Certificate of Instrument Performance for each instrument passing final testing
- Unlimited priority technical support
- Free firmware updates
